Plumber, Steam fitter, Gas fitter, Vhandler, born in Kaiserslautern, Bavaria in 1848, came to the US as a small child around 1850, father of founding partner, John J West, Sr.

A BRIEF HISTORY OF PLUMBERS SUPPLY CO.

Plumbers Supply Co. was established as a wholesale distributor business in 1921 by its founding father, John J. Werst, Sr., and six other partners.

The first location was opened at 610 E 3rd St in Lexington, KY with Charlie Werst serving as manager. The second location opened the following year in Evansville, IN at the corner of 7th St and Pennsylvania Ave (now Division St).

In 1930, the Louisville location opened in its present 1000 E Main Street location. One of the founding partners, Robert George, opened the Indianapolis store at 2015 Martindale Ave on the North Side. Indianapolis moved into a larger building at 11th and Cornell in 1940, remaining there until construction of I-65 in 1967. A new Indianapolis warehouse was then built at E Raymond St., which remains in operation today as our Indianapolis hub. Our Evansville, IN warehouse closed in 1972, than reopened in 1983 at its current location on W. Michigan Street.

Continued expansion into south central Kentucky occurred when we opened a facility in Bowling Green, KY in 1987. Plumbers Supply returned to Lexington, KY in 1990 at our present location on the corner of Industry Rd and Eastland Dr. Additional branches have been added in strategic Indianapolis and Louisville suburbs including Fishers, IN, Franklin, IN, East End of Louisville, KY, Elizabethtown, KY and Clarksville, IN.

Today the Louisville 1000 E Main St location remains as the only location in continuous use, strategically located at the intersection of the Butchertown, Phoenix Hill and NULU neighborhoods near the East End of Main Street.

The company is now under third and fourth generation management with John J. (Jay) Werst III serving as Chairman, Bruce Madison as CEO, and Jay Johnson as President and COO.

ABOUT US

For over 90 years, Plumbers Supply Co. has built a reputation as the region's ultimate supply and service source in the plumbing, heating, fire protection and piping industry. In 1921, John Werst Sr. co-founded the first of what have become five separate divisions, 14 branch offices, and a main warehouse facility boasting 45,000+ different products at a value of more than \$20,000,000. Our tag line "Everything Under the Sun" has become our competitive advantage and given us a reputation as a one-stop-shop. Inventory is only a component of the value we strive to deliver as a company; our Company Mission is to "build trusting relationships with our customers and suppliers, allowing us to deliver the products and expertise they value."

Plumbers Supply Co. prides itself on continuing what allowed it to grow so successfully; extensive inventories, close customer relationships supported by knowledgeable staff, and quick response times.

Plumbers Supply Co. is organized into five separate divisions; Industrial/PVF, Plumbing, Hydronics/Pump, HVAC, and Fire Protection. Each of our branches maintains an impressive local inventory, and has the added advantage of drawing upon the 45,000 plus item inventory of the Louisville location.

Equipped with a massive fleet of trucks at each location, Plumbers Supply Co. can quickly dispatch everything from pick-up trucks to tractor trailers to your jobsite. Deliveries can be arranged for specific times, or in an emergency, one-hour deliveries can be made from each branch.

We have personnel on call around the clock, every day of the year, to allow our customers access to our inventory during emergencies. Ask us how you can check your pricing, stock and even place orders 24/7 via a secure Internet Account.

Capacitors

All PSC motors are designed to be used with an external capacitor. This capacitor operates in the circuit continuously. It is commonly referred to as a run capacitor. The most common capacitor for fan/blower motors is 5 MFD, 370V. However, other ratings will also be used, depending on the model.

FACT: A capacitor is a device capable of storing and releasing an electric charge.

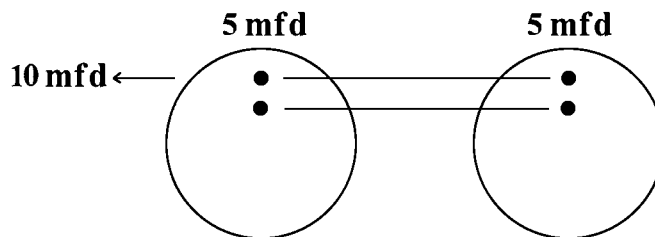

FACT: Always discharge a capacitor before removing it from an installation.

FACT: The capacitor used with a capacitor start motor is called a start capacitor because it is only used while the motor is starting.

FACT: The capacitor rating is printed on the capacitor itself, the motor nameplate, or the system wiring diagram. You must know this rating to properly choose the replacement capacitor.

FACT: Capacitors are rated by both capacity (2 MFD, 5 MFD, etc.) and voltage (370V, 440V, etc). The rated capacitor size should not be changed, since the motor operates at maximum efficiency when using the specified capacitor size. If necessary, the replacement capacitor voltage rating can be high then specified, but not lower without impairing capacitor life.

FACT: Capacitors can be hooked up in parallel to increase capacity. For example, two 5 MFD, 370V capacitors connected in parallel are the equivalent of a 10 MFD, 370V capacitor. See illustration below.

FACT: If the ground lead is present, it will be green or green with a yellow tracer. The wiring diagram for all FASCO motors is shown on the motor nameplate.

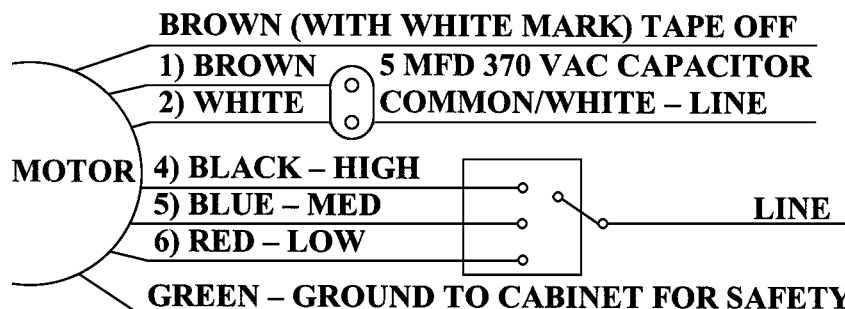

FACT: To reverse rotation of FASCO electrically reversible models, switch the four external connectors (two female receptors and two male plugs). It's impossible to plug the male plugs together, and it's impossible to plug the female receptors into each other. One plug goes into each receptor, and if rotation is wrong, simply reverse the plugs.

FACT: The current FASCO reversing lead system consists of two yellow and two purple leads.

FACT: On multi-speed motors, always connect the common (white) lead to the power first.

FACT: Connecting like-color leads (yellow to yellow, purple to purple) will give clockwise rotation (shaft end). Connecting unlike-color leads will give counterclockwise rotation (shaft end).

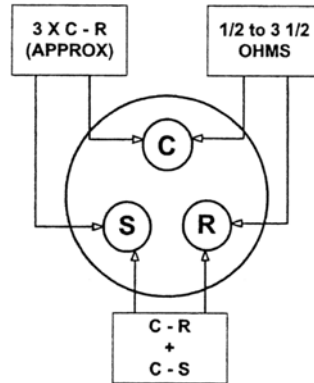

FACT: When the original motor does not have two separate capacitor leads and the original wiring pattern is desired, the following diagram can be used for most FASCO motors.

Compressor Guide

OHM VALUES FOR COMPRESSOR WINDINGS

Remove compressor wires before taking the following readings:

Reading 1: Common to Run = 1/2 to 3-1/2 Ohms

Reading 2: Common to Start = Common to Run value 3

Reading 3: Start to Run = Reading 1 + Reading 2

Procedure for Starting a Compressor the First Time

Energize compressor for maximum of 2 seconds, then let it sit for 1/2 minute. Repeat process three times, adding 1 second to each successive run cycle, for a total of four operations. Now energize the compressor for 15 seconds and leave it off 1/2 minute.

- 1st Cycle: On 2 seconds, off 30 seconds**
- 2nd Cycle: On 3 seconds, off 30 seconds**
- 3rd Cycle: On 4 seconds, off 30 seconds**
- 4th Cycle: On 5 seconds, off 30 seconds**
- 5th Cycle: On 15 seconds, off 30 seconds**

The short run time between cycles minimizes pressure change in compressor shell and greatly reduces oil foaming. The 1/2 minute off time allows oil to settle back into the sump. It is now safe to operate the compressor without loss of lubrication. This entire process takes less than five minutes.

If the compressor fails to start on the first bump, wait 10 minutes and try again. If it fails to start after the 3rd bump, temporarily install a Kickstart in parallel with the run capacitor. It should not be necessary to leave the Kickstart in place once the 5-cycle bump has been completed.
