PUNCH & CHISELS

Non marring, non sparking USA brass punches and scrapers now offered in an improved smooth polished finish with a double knurled feature for more effective use. Whether the job requires a limited or the widest range of brass tools, Mayhew is the only professional solution to provide the requisite number of tools, within spec and with packaging that withstands typical harsh workplace environments.

Designed to remove gaskets and softer material where there is a concern of damaging the surface or causing sparks.

Hard Cap Safety Chisels are designed using safety enhanced impact technology, SEIT. This technology utilizes the latest polymer science developed by Dupont to reduce bio-mechanical hazards to the user. Polymer caps will not break or deform and significantly reduces transmission of shock and vibration while protecting the fingers and hand from glancing blows and miss hits. Hard Caps provide a greatly enlarged target and reduce the injurious noise of metal-on-metal impact. Research and testing has shown that hard cap safety chisels produce a significantly safer, more comfortable struck tool that eliminates mushrooming and flying metal fragments. Cushion grip provides greater comfort while reducing shock, moderates heat and cold and is oil and grease resistant. Tools are hand forged and individually heat-treated from premium grade American alloy steel.

# MAYHEW TOOLS<sup>®</sup> INSERT BITS

## PROFESSIONAL GRADE. AMERICAN MADE.

All of Mayhew Tools made in the USA insert bits are designed for use with a screwdriver and/or can be used with power tools when using a bit adapter. Designed to drive screws, there are a variety of styles available each featuring a unique tip to accommodate a wide range of screws and applications. Styles include Slotted, Phillips, Torx<sup>®</sup>, Tamper Torx<sup>®</sup>, Torx<sup>®</sup> Plus, Torx<sup>®</sup> Tamper Torx Plus<sup>®</sup>, SAE and Metric Hex, Tamperproof SAE and Metric Hex, SAE and Metric Ball Hex, Square Recess, Triple Square, Pozi Drive, Tamperproof Triple Square, Clutch, Spanner, Tri-Wing, Mortorq<sup>®</sup> Super, Ribe, and Double Ended Bits.

## — Slotted

Slotted insert bits are for multi-purpose use with screwdrivers. Ideal for engaging sheet metal screws for installation or removal.

## Phillips Reduced

The reduced diameter Phillips insert bits feature a head that is smaller in diameter than the traditional which allows the bit to fit deeper into the screw head and get a more positive lock on the fastener. Ideal for driving drywall or particle board screws.

## Phillips ACR

Phillips ACR bits differ from standard Phillips bits, in that the tip is notched to help prevent drive stripping and cam-out while also allowing for off angle driving.

## Phillips Pin Head

The Phillips Pin Head Bit is designed to drive a particular size screw, making each bit 'size specific'. An opening at the tip accommodates the pin in the recess of tamper-resistant Phillips screws, providing an added level of security that prevents removal with ordinary screwdrivers.

*Insert Bits are consumable. Not covered under Warranty.*

Torx® fasteners are becoming more and more common in automotive and appliance assembly for their ability to prevent cam-out better than a Phillips or Slotted. Designed to match the improvements in torque-limiting automatic screwdriving tools.

## Tamper Torx®

Tamper-resistant Torx® bits feature an opening at the tip which accommodates the pin in the recess of tamper-resistant Torx screws. Also known as pin-in-Torx bits, the feature makes them impossible to remove without the right equipment and are especially helpful for applications requiring added security.

## Torx® Plus

The six rounded points of the Torx Plus® bits feature a greater engagement area with the Torx-Plus Screws for higher torque transfer and reduced cam-out. While Torx Plus® bits have a similar profile to standard Torx, they are not compatible with standard Torx® screws.

## Tamper Torx® Plus

A variation of standard Torx® bits, these bits have a hole in the center to accommodate security screws and prevent the use of standard Torx bits. Generally used on anything people do not want you to have access to, these bits are becoming more and more common in automotive and appliance assembly.

## Pozidriv®

Pozidriv style fasteners have ribs between each of the four arms of the cross which enhances the grip between the bit and the fastener. These bits provide a secure grip, reduce cam-out, and are ideal in electrical equipment applications.

## Torq-Set®

In Torq-Set® bits, the arms of the cross are offset from each other, so they do not align to form intersecting slots across the top of the head. They are often used for torque-sensitive applications which are common in the aerospace industry and automotive repair sector.

## Clutch

Clutch head screws are often used in travel manufacturing and for long-lasting installations. The head of clutch head screws have a normal drive and slanted rear face, preventing the screwdriver from applying torque when loosening fasteners.

## Ribe

Ribe bits are also known as Polydrive bits. They resemble a six-point Phillips with rounded arcs between points, resist cam-out, and are common in high-torque automobile applications.

# MAYHEW TOOLS' POWER BITS

## PROFESSIONAL GRADE. AMERICAN MADE.

All of Mayhew Tools made in the USA power bits feature a groove in their shank for easy insertion and use with power tools without the need for an adapter. Designed to drive screws, there are a variety of styles available each featuring a unique tip to accommodate a wide range of screws and applications. Styles include Slotted, Phillips, Torx®, Tamper Torx®, Torx® Plus, Torx® Tamper Torx Plus®, SAE and Metric Hex, Tamperproof SAE and Metric Hex, SAE and Metric Ball Hex, Square Recess, Triple Square, Pozi Drive, Tamperproof Triple Square, Clutch, Spanner, Tri-Wing, Mortorq® Super, Ribe, and Double Ended Bits.

### Slotted

Slotted insert bits are for multi-purpose use with screwdrivers. Ideal for engaging sheet metal screws for installation or removal.

**Torx®**

Torx® fasteners are becoming more and more common in automotive and appliance assembly for their ability to prevent cam-out better than a Phillips or Slotted. Designed to match the improvements in torque-limiting automatic screwdriving tools.

## Tamper Torx®

Tamper-resistant Torx® bits feature an opening at the tip which accommodates the pin in the recess of tamper-resistant Torx screws. Also known as pin-in-Torx bits, the feature makes them impossible to remove without the right equipment and are especially helpful for applications requiring added security.

## SAE Ball Hex

The ball-end hex provides an angled approach to engage hard-to-reach SAE fasteners, whereby the ball end makes it easier to slide the hex into the receiving slot.

## Square Recess

A Square Recess insert bit is highly-durable and can be used at construction sites and for woodworking. It provides easier insertion of the tool due to tapering and it rarely slips out of place.

## Clutch

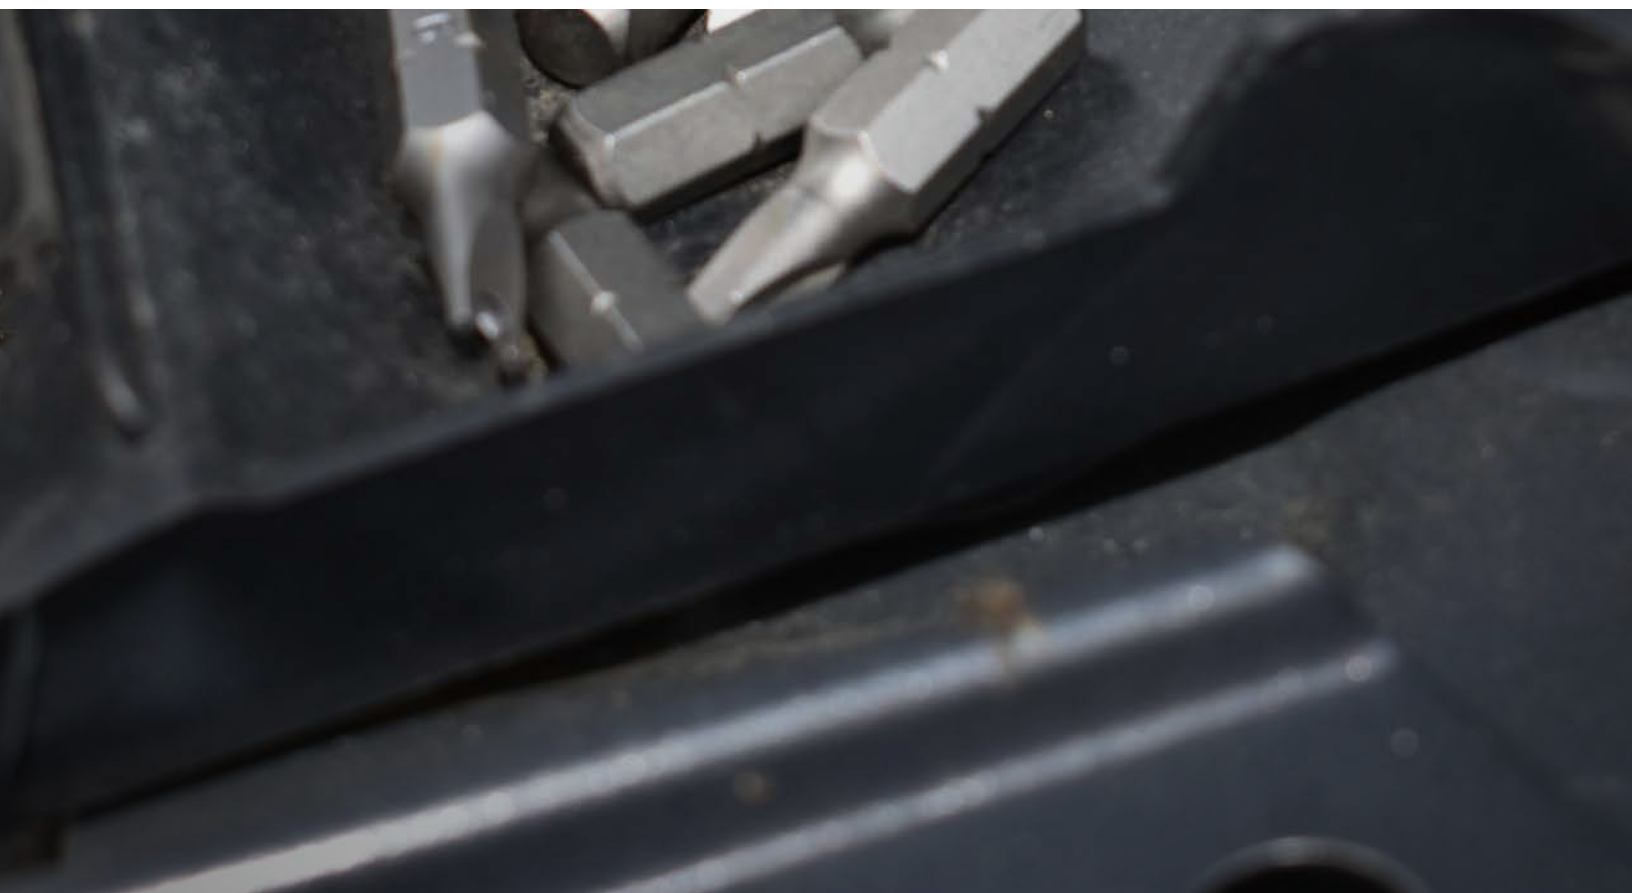

Clutch head screws are often used in travel manufacturing and for long-lasting installations. The head of clutch head screws have a normal drive and slanted rear face, preventing the screwdriver from applying torque when loosening fasteners.
