

RESPIRATORY

A respirator is a personal protective device that is worn on the face, covers at least the nose and mouth, and is used to reduce the wearer's risk of inhaling hazardous airborne particles (including dust particles and infectious agents), gases, or vapors. Respirators are considered as a "last line of defense" in the occupational hierarchy of controls. They are recommended when engineering and administrative controls are not feasible or sufficient to control the hazard, or until these other controls can be put in place.

Respirator Styles

Disposable (Air-Purifying)

Disposable respirators are maintenance-free, economical and feature other benefits such as comfort.

Reusable (Air-Purifying)

Reusable respirators are specifically designed to offer versatility, comfort and extended wear. They are suitable for either negative or positive pressure uses and use filters and/or cartridges offered in a vast variety of combinations for a wide range of applications.

Maintenance-Free (Air-Purifying) Respirators

APR's are supplied fully assembled with gas or chemical cartridges. Filters provide additional protection against particulates and other nuisance odors. Maintenance-free air-purifying respirators should be disposed of after their predetermined usage.

Low-Maintenance (Air-Purifying) Respirators

These respirators offer affordable protection with the flexibility of reusable respirators. Users have the ability to interchange filters, pre-filters and cartridges.

Powered (Air-Purifying) Respirators - PAPR

A PAPR is a motorized (battery powered) air system that delivers a continuous flow of filtered air. These systems are designed for use with specific headgear such as hoods, helmets and facepieces.

Supplied Air & Airline Respirators

These respirators are designed to comfortably deliver clean air to the user, from a variety of sources. The air can be supplied from high pressure, low pressure, or cylinder sources.

Self-Contained Breathing Apparatus – SCBA

These self-contained systems allow users to transport their own supply of air. With a variety of harness and cylinder choices, an SCBA offers the protection needed in most oxygen deficient or Immediate Danger to Life and Health (IDLH) situations such as in confined space environments.

Emergency Escape Breathing Apparatus – EEBA

EEBA's are compact systems easily donned and used within a matter of seconds. These systems are lightweight and utilize small air tanks allowing for quick, comfortable and safe exits from IDLH atmospheres and/or confined spaces.

3 V

2000 Series Filters

Features:

- · Nuisance level organic vapor/acid gas relief.
- Provides approved protection in environments where oil aerosols may be present.

Test & Approvals: NIOSH

WARNING

These respirators help protect against certain airborne contaminants. Before use, the wearer must read and understand the User Instructions provided as a part of the product packaging. A written respiratory protection program must be implemented meeting all the requirements of OSHA 1910.134 including training, fit testing and medical evaluation. In Canada, CSA standards Z94.4 requirements must be met and/or requirements of the applicable jurisdiction, as appropriate.

Misuse may result in sickness or death. For proper use, see packaging instructions, supervisor, or call 3M PSD Technical Service in USA at 1-800-243-4630 and in Canada at 1-800-267-4414.

WARNING

These respirators help protect against certain airborne contaminants. Before use, the wearer must read and understand the User Instructions provided as a part of the product packaging. A written respiratory protection program must be implemented meeting all the requirements of OSHA 1910.134 including training, fit testing and medical evaluation. In Canada, CSA standards Z94.4 requirements must be met and/or requirements of the applicable jurisdiction, as appropriate. Misuse may result in sickness or death. For proper use, see packaging instructions, supervisor, or call 3M PSD Technical Service in USA at 1-800-243-4630 and in Canada at 1-800-267-4414.

JACKSON

R20 Particulate Respirators

Features

- Effective against all oil-based and non-oil based particulate aerosols and dust that do not emit harmful vapors.
- Carbon layer reduces exposure to nuisance levels of organic vapors.
- Wide, comfortable user-preferred head straps.
- Adjustable head straps.

Test & Approvals: NIOSH Approved

Size Group: One Size
