Custom GHS Labels

Use labels to convey hazard class information in accordance with the Globally Harmonized System (GHS).

Labels follow the information guidelines specified by the GHS and must include OSHA's required label elements. For GHS and DOT pictogram combination labels, larger label sizes are recommended. The DOT requires that transport pictograms be at least 4" x 4". OSHA publishes no size requirements for the GHS label or GHS pictograms, but it is recommended the label elements be proportionate to each other.

Required Label Elements

- 1 Product Identifier** – Should match the product identifier used on the Safety Data Sheets.
- 2 Signal Word** – Indicates the relative level of the hazard's severity. "Danger" and "Warning" are the GHS signal words.
- 3 Pictograms** – Graphic compositions intended to convey specific hazard information.
- 4 Hazard Statements** – A phrase assigned to a hazard class and category that describes the nature of the product hazards.
- 5 Precautionary Statements** – Describe recommended measures to minimize or prevent adverse effects resulting from exposure.
- 6 Supplier Identification** – The name, address, and telephone number of the manufacturer or supplier.

Blank Flexible Marker Stakes

Use for delineation alongside roadways, at end of pathways, and parking lot areas, as well as identifying buried utility lines.

Stakes are flexible to withstand high wind loads and high-speed impacts. They will bounce back into place when hit or run over by a vehicle. All-weather stakes are UV-stabilized with color throughout, and will not rot, rust, or need painting.

49 CFR 192.707 (a) Buried Pipelines...a line marker must be placed and maintained as close as practical over each buried main and transmission line...

(c) Pipelines above ground. Line markers must be placed and maintained along each section of a main and transmission line that is located above ground in an area that is accessible to the public.
