email: sales@rivetsinstock.com

Our supplier is one of the world's market leaders in anaerobics, cyanoacrylates, epoxies and ultra-violet technologies. With low overhead and in-house chemical formulation and blending, we offer products with the same high quality and performance of name brands, but at cost savings of up to 40%.

- Anaerobic Threadlockers** - Lock and seal threaded fasteners.
Types: Low Strength, Medium Strength, Oil Tolerant, High Strength, Permanent Strength
Sizes: 2 mL Bullet Tube, 10 mL Bottle, 50 mL Bottle, 250 mL Bottle, 1 L Jug
- VC-3 Threadmate** - Non-traditional threadlocker. Adjustable; Removable; Reusable.
Prevents loosening of fasteners from shock and vibration.
Sizes: 1 mL Pillow Pack, 5 mL Tube, 30 mL Bottle w/ Brush Cap Applicator, 250 mL Can w/ Spout
- Thread Sealants** - Seal and secure metal pipes and fittings.
Types: Controlled Strength, High Strength, Pneumatic, Hydraulic, Refrigerant, General Purpose
Sizes: 50 mL Tube, 250 mL Tube, 50 mL Bottle, 250 mL Bottle, 1 L Jug
- Retaining Compounds** - Increase shear strength on non-threaded, cylindrical metal assemblies.
Types: General Purpose, High Strength, Impact Resistant, Rapid Curing, Core Plug Sealant, High Temp.
Sizes: 2 mL Bullet Tube, 10 mL Bottle, 50 mL Bottle, 250 mL Bottle, 1 L Jug
- Liquid Gasketing** - Form-in-place gasket for close-fitting, rigid, metal flanges.
Types: Flexible; High Temperature Rigid Flange
Sizes: 50 mL Tube, 250 mL Tube, 300 mL Cartridge
- Anti-Seize Compounds** - Prevents seizing, galling, and cold welding.
Reduces excessive wear on threads, gears, cables, chains, and sprockets. Protects against corrosion.
Types: Aluminum, Copper, and Graphite; Copper and Graphite; Nickel and Graphite
Sizes: 2 mL Bullet Tube, 4 oz Jar w/ Brush Applicator, 8 oz Jar w/ Brush Applicator, 16 oz Jar w/ Brush
- Cyanoacrylates (Super Glues)** - Single-part, quick-fixturing, clear adhesives.
Types: Multi-Purpose, Wicking Grade, Metal Bonder, Plastic Bonder, Shock Resistant, Rubber Toughened
Sizes: 2 mL Bullet Tube, 20 gm Tube, 20 gm Bottle, 1 oz Bottle, 1 lb Bottle
- Light Cure Adhesives** - Single-part acrylates that cure when exposed to UV light.
Types: Flexible; High Temperature Rigid Flange
Sizes: 50 mL Tube, 250 mL Tube, 300 mL Cartridge
- Structural Adhesives** - Use with Activator to bond metal, composite, plastic, wood, & more.
Sizes: 50 mL Bottle, 1 L Bottle
- Primers, Accelerators, and Activators** - Use to promote maximum performance.
- Hot-Melts / Urethanes / Epoxies** - Solutions for a variety of assembly requirements.
- Private Label Services** - Create your own unique brand identity.

Notes: 1. Approximate proportions: $A = 1.81 \times D$; $H = 1.192 (\frac{MAX\ A-D}{2})$

2. Sharp edged calculated on basic diameter of rivet and 78-degree included angle extended to a sharp corner.

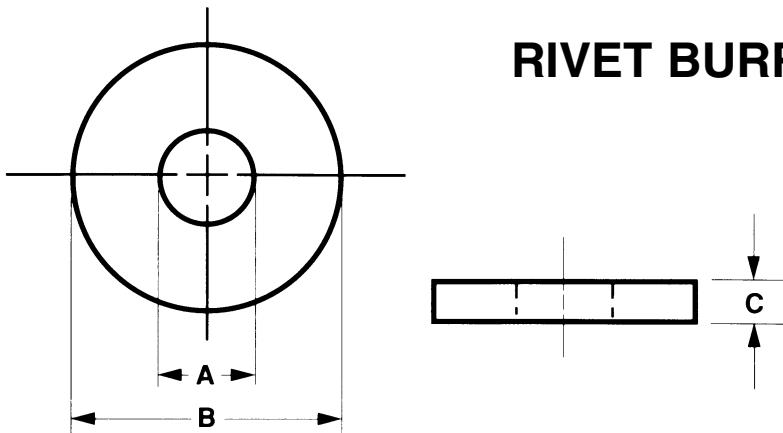

3. Rounded or flat edged irregular shaped head since the heads of these rivets are not machined or trimmed, the circumference may be somewhat irregular and edges may be rounded or flat.

4. Head height (H) is given for reference purposes only. Variations in this dimension are controlled by the diameters (A) and (D) and the included angle of the head.

LARGE RIVET LENGTH TOLERANCES

Lengths	Rivet Diameter (in.)	Length Tolerance (in.)	Lengths	Rivet Diameter (in.)	Length Tolerance (in.)
Up to and incl. 6 in.	1/2 and 5/8 3/4 and 7/8 1 and larger	± 1/32 ± 1/16 ± 3/32	Over 6 in.	1/2 and 5/8 3/4 and 7/8 1 and larger	± 1/16 ± 1/8 ± 3/32

5/32	0.162	0.437	.036	.065
3/16	0.203	0.500	.036	.065
1/4	0.265	0.625	.036	.065

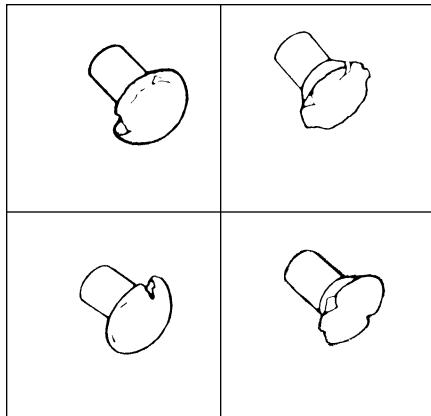

Burrs supplied in steel, aluminum and stainless steel.
Other sizes and materials quoted on request.

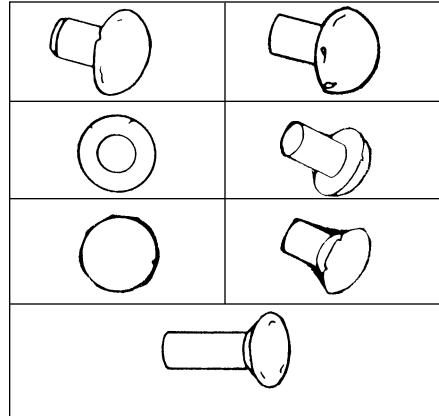

QUALITY STANDARDS

The different types of rivet imperfections indicated in these drawings are generally permissible by industry standards. Each imperfection is exaggerated for greater clarity. No more than three defects are permitted per rivet. A crack is defined as a clear, crystalline break passing through the grain or grain boundary. This classification includes nicks, seams, inclusions and gouges. Seams or longitudinal scratches sometimes cause cracks to appear.

Major Defects

Minor Defects

PRESSESURES TO DRIVE RIVETS

Recommendation of Safe Practice to Form Steel Rivet Heads

Formula

$$\text{DIA}^2 \times 88.36 = \text{Tons of Pressure to Drive Rivets}$$

DRIVEN HEADS

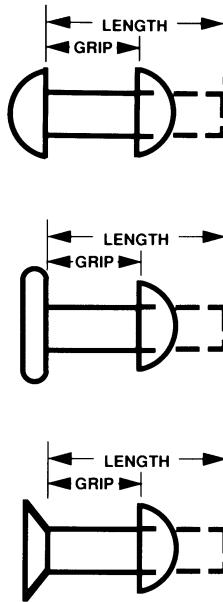

MANUFACTURED HEADS

The above driven heads represent what is considered good practice for riveting. Rivets used for cold riveting should be cold formed and must be annealed after forming before driving.

The pressure required to cold form the heads will, of course, depend on the material in the rivet. For the commonly used carbon steel rivet, the above listed pressures are needed.

RIVET LENGTHS FOR VARIOUS GRIPS

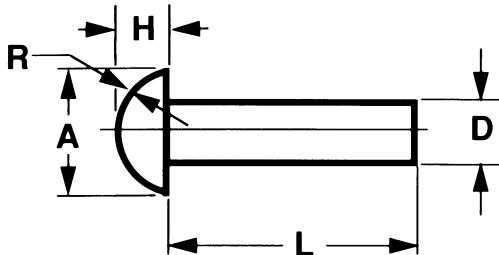

A general rule of thumb that is practiced throughout the industry in determining the length of small rivets is to take 1-1/2 times the body diameter and add it to the material thickness, result being the length.

Grips	Rivet Diameters								
	1/4	3/8	1/2	5/8	3/4	7/8	1	1-1/8	1-1/4
1/2	1-1/8	1-1/4	1-1/2	1-5/8	1-3/4	2	2-1/4	-	-

ALUMINUM RIVET DATA

APPROXIMATE PRESSURES REQUIRED TO DRIVE ROUND HEADS WITH SQUEEZE RIVETER

Pressures given are for complete round heads as dimensioned.

Rivet size, in.	Pressures in tons		
	Cold-driven		
	1100-F	2117-T4	6053-T61
3/16	3	6	4
1/4	6	10	8
3/8	14	23	16
1/2	25	39	30

1. Driven immediately after quenching.

RIVET TOLERANCES

Diameter of Shank

Dimensions in Inches

Nominal Diameter	Minus	Plus
0.052-0.094	0.001	0.003
0.095-0.156	0.001	0.004
0.157-0.219	0.002	0.005
0.220-0.375	0.003	0.006
0.376-0.625	0.004	0.008
0.626-0.875	0.006	0.012
0.876-1.000	0.007	0.015

Height of Head

Plus 8 percent minus 4 percent of the nominal or basic head height, but in no case less than ± 0.005 in.

Out-of-Roundness of Head and Eccentricity of Head in Relation to Shank

Dimensions in Inches

Nominal head diameter	Total dial indicator reading resulting from eccentricity and out-of-roundness not to exceed
up to 1/4	0.015
over 1/4 to 3/8	0.020

Length of Shank

Diameters to 3/4 in. x up to 4 in. long inclusive
 $\pm 1/64$ in. Diameters to 3/4 in. in lengths over 4 in.
 $\pm 1/32$ in. Diameters over 3/4 in. to 4 in. long $\pm 1/32$ in.
Diameters over 3/4 in. in lengths over 4 in. $\pm 1/16$ in.

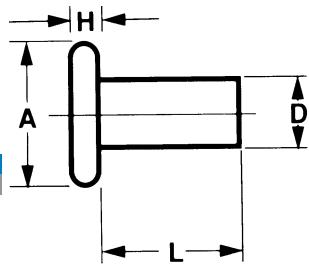

Diameter of Head

Because the heads of these rivets are not machined or trimmed, the circumference may be irregular and the edges rounded or flat.

The diameter of the rivet head shall be within -8 percent and + 4 percent of the nominal head diameter

AS REQUIRED

SEMI-TUBULAR RIVET DATA

The LENGTH (L) of rivet to be used is determined by adding the MATERIAL THICKNESS (MT) and the CLINCH ALLOWANCE (CA). Specify the length to the nearest fraction (not less than 64ths).

EXAMPLE: to determine the length of a 1/8 diameter for two parts each of which are .093" thick.

GENERAL DATA:

Bearing surface for the oval and truss head rivets shall be at right angles with the body within 2 degrees.

Eccentricity of the rivet head to the shank, unevenness of the tubular end, surface seams or other imperfections shall not be such that the usability of the rivet will be impaired.

Radius of the fillet under the head of oval and truss head rivets shall not exceed the values in standards shown in table 2.

Materials of semi-tubular rivets shall be low carbon steel (0.1 of 1 percent carbor or less), commercial yellow brass, copper, aluminum and other materials as agreed upon between purchaser and supplier.

NOTES:

1. All dimensions are in inches.
2. Rivet length is measured from the under side of rivet head.
3. The hole depth to point of apex shall not be greater than shank length.
4. Because the heads of these rivets are not machined or trimmed the circumference may be somewhat irregular and edges may be rounded or flat.

TABLE 2 / LENGTH INCREMENTS, LENGTH TOLERANCES AND FILLET RADIUS STANDARDS

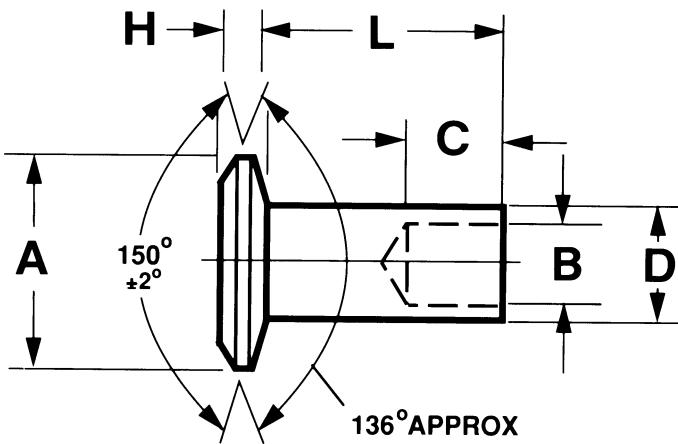

Body Diameter Limits	Length Increment	Minimum Length	Length Tolerances			Maximum Fillet Radius
			Up To And Including 4 Times Body Diameter	Over 4 Times Body Diameter And Up To And Including 8 Times Body Diameter	Over 8 Times Body Diameter

Above rivets available in brass and steel. After selecting the style and dimensions of the rivet required, a suffix must be added to the part number indicating the length of rivet in 16ths of an inch. Example: A brake-rivet 5/16th of an inch long would be BR4-5B, if the same part was steel the part number would be BR4-5S.

					814	.751-875	1.195		
					816	.876-1.00	1.320		

Notes:

* All Dimensions are in inches.

* For application data, see table 2

* The Junction of head shank shall have a fillet with a max radius as shown.

* The blind side protrusion (F) equals the max length of rivet body (L) as given in Table 2 for the applicable grip. Minimum blind side clearance may be calculated by subtracting the actual grip (G) (i.e. the total thickness of material to be joined) from the blind side protrusion (F). (Example: To join two plates each .100 in. thick with a 5/32 in. rivet, a No. 54 rivet would be used. Minimum blind side clearance necessary to permit proper rivet setting would be L-G, which is .500 - .200 and equals .300 in.)

					816	.876-1.00	1.400
See Notes		2					

Notes:

- * All Dimensions are in inches.
- * For application data, see table 2
- * Maximum head diameter is called on nominal rivet diameter and nominal head angle extended to sharp corner. Minimum head diameter is absolute.
- * Head Height is given for reference purposes only. Variations in this dimension are controlled by the diameters (H) and (D) and the included angle of the head.
- * The blind side protrusion (F) equals the max length of rivet body (L) as given in Table 2 for the applicable grip. Minimum blind side clearance may be calculated by subtracting the actual grip (G) (i.e. the total thickness of material to be joined) from the blind side protrusion (F). (Example: To join two plates each .100 in. thick with a 5/32 in. rivet, a No. 54 rivet would be used. Minimum blind side clearance necessary to permit proper rivet setting would be L-G, which is .550 - .200 and equals .350 in.)

BULB-TITE® BLIND RIVETS

More than forty years ago the first Bulb-tite was developed to solve application requirements in the Pre-Engineered Metal Building industry. Since that time the Bulb-tite product line has been expanded to meet application requirements in a wide range of industries. The Bulb-tite rivet body folds into three separate legs forming a large blind-side head. This large bearing head evenly distributes the Bulb-tite's high clamp force in soft, thin or brittle materials while providing high pull-through resistance. The Bulb-tite's wide grip range enables a single Bulb-tite to work in a greater variation of thickness. Some versions of the Bulb-tite feature a special flush break mandrel that effectively seals the rivet bore and adds greater shear strength. See note for special installation tool nose tip requirements.*

*Note – Special Bulb-tite installation tool nosepiece is required for use with Bulb-tite rivets: RV6601, RV6603, RV6604, RV6605, RV6606, RV6671, RV6676 and RV6696 series.

HOW THE BULB-TITE WORKS: During installation the rivet body folds into three separate legs, forming the blind-side upset head. The Bulb-tite mandrel breaks off *flush with the rivet head.

*Flush mandrel break requires use of special Bulb-tite installation tool nose tip.

WEATHER TIGHT: A special nose tip on the rivet installation tool crimps a crown feature on the rivet head. This crown-crimp effectively seals the rivet bore off from intrusion of dirt and moisture. Adding the optional washer to the Bulb-tite, creates an additional seal around the perimeter of the rivet head, to stop moisture from intruding beneath the rivet head.

HIGH STRENGTH: Another benefit of the Bulb-tite rivet's retained mandrel core is the added strength it provides. Bulb-tite rivets are less prone to failure in high shear loads.

HIGH CLAMPING: The large three-legged upset head evenly distributes the Bulb-tite rivet's high clamp load over a broader bearing surface than do conventional blind rivets. This enables soft, thin, ductile and even brittle materials to be securely clamped without deformation, cracking or other damage to the application.

HARD-TO-FASTEN APPLICATIONS: Bulb-tite rivets function well in materials where other fasteners fail. The folded legs individually conform to curved surfaces enabling fastening onto pipes, corrugations and other challenging shaped applications. Oversized or elongated holes can be adequately covered by the large leg formations to resist pull through under stress in high tension-load applications.

MULTI-GRIP CAPABILITY: Each Bulb-tite handles a wide variation in material thickness. Most sizes fasten over a 1/4" thickness range. Fewer rivet sizes may be required resulting in reduced inventory requirements and simplified fastener selection.

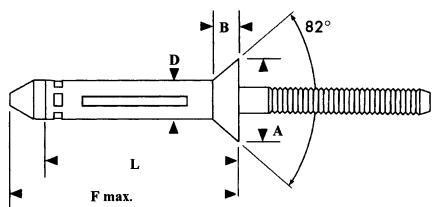

CHOICE OF FINISHED APPEARANCE: Bulb-tite rivets are offered in a variety of head styles. Standard Dome, Low Profile, Large Flange and Countersunk head styles are available. Color matched plastic finish caps can be snapped onto certain Bulb-tite head styles to conceal installed rivet heads. The unique Shaveable Head Bulb-tite was specifically designed for use in heavy truck and trailer applications where solid rivets are used. They are ideal for repair of solid riveted assemblies where access to the application's blind side may be no longer accessible. The Shaveable Bulb-tite rivet head is finished using a special head-shaving tool. Shaved Bulb-tite rivet heads then match the appearance of solid rivets in the assembly.

MATERIAL CHOICES: The standard Bulb-tite rivets are made of aluminum alloy, providing a durable non-rusting fastener that can withstand weather-related corrosion. Some Bulb-tite sizes are also available in steel and monel materials where higher strength is required.

Shaveable Series

The Shaveable series of Bulb-tite rivets are designed for use in applications where solid "bucked" type rivets are commonly used such as truck/trailer body assembly or repair. The Shaveable Bulb-tite simplifies repairs made to solid riveted assemblies, as rivet replacement does not require access to the blind side of the application. The Bulb-tite's large blindsides footprint functions well in rivet holes that have become elongated or too large to allow use of a solid rivet. Simply install the Bulb-tite and finish the rivet head with an Olympic head-shaving tool. The shaved head profile perfectly matches the solid brazier head rivets used elsewhere in the assembly. Shaveable Bulb-tites are available in 5/32", 3/16" and 1/4" diameters and can be installed with most standard blind rivet tools. A special tool nose tip is not required. The installed rivet's mandrel is designed to break high, leaving an exposed mandrel plug extending above the set fastener's head. The remaining mandrel protrusion is snipped off using the RV57 mandrel trimming tool. Finally, the rivet head is shaved using the HS310 rivet head shaver, leaving a finished rivet head that matches solid rivets in appearance.

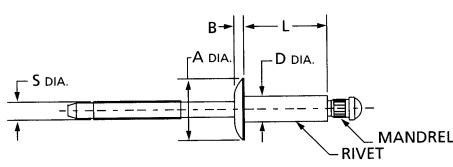

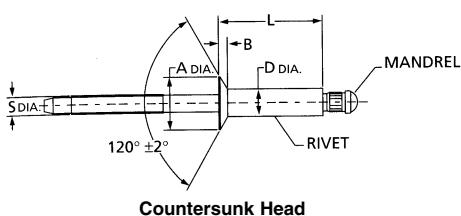

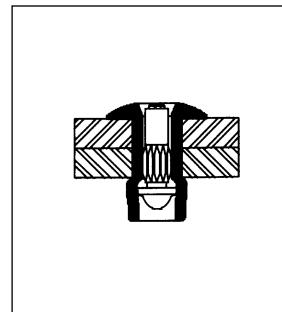

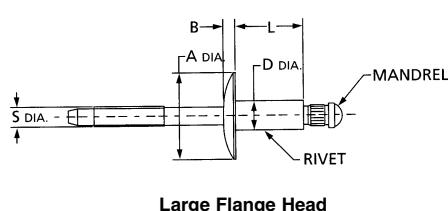

Q® RIVET

Internal friction lock with positive retention. Good shear strength. Provides moderate hole fill and a weather-resistant feature. Available in a variety of materials and headstyles.

Q® RIVET

IDENTIFICATION CODE:

First letter is rivet material:

A = 5052 Aluminum **A** = 5056 Aluminum **F** = Stainless

S = Steel

Second letter is mandrel material:

A = 7178 Aluminum **S** = Steel

F = Stainless

Third letter is head style:

P = Protruding

L = Large Flange

C = Countersunk

Fourth letter is type of rivet:

Q = Q Rivet, structural, self-plugging

First number is rivet diameter in 32nds of an inch. For example, 06 is 6/32nds or 3/16" diameter

Second number is rivet maximum grip length in 16th of an inch. For example, 08 is 8/16th or 1/2" grip length

BLIND RIVETS: AVINOX II RIVETS

The Avinox® stainless steel rivet offers a high-strength fastening solution ideal for thin sheet metals. The stainless steel breakstem provides excellent bulbing tail formation and high shear and tensile strength. This industrial fastener's stainless steel construction provides good corrosion resistance in applications subject to elevated temperatures.

Key features and benefits

- High corrosion resistance
- High shear and tensile strength
- Good hole fill
- Provides a large blind side bearing area against the rear sheet
- Retained stem
- Ideal for applications requiring elevated temperatures
- Spreads the tail bearing load/clamp load on the rear sheet
- Ideal for use in thin sheet materials
- Compensates for irregular, oversized, slotted or misaligned holes
- Can stop movement in non-standard holes
- Provides strong, vibration resistant joints
- No damage, electrical problems or rattling due to loose stems

JC-LOCK BLIND RIVETS

The JC-Lock is a structural blind rivet with a wide grip range, high strength and water resistant.

2 PIECE MATE RIVETS

2 Piece Mate Rivets

A two-piece Non-Structural fastening rivet system for extra-long grip applications.

Benefits:

- * Extra Wide Grip Range: Can be used in thickness up to nearly 4 inches.
- * Controlled Clamp Up: Clamps securely without crushing parent material.
- * Non-Critical: Not necessary to have close-tolerance hole preparation.
- * Dimensional Data

LOCKBOLTS AND COLLARS

Huck Magna Grip®

Huck Lock Bolt C6L®

Hucktainer®

Lockbolt Tooling

LOCKBOLTS

LockBolts consist of two parts: a pin, and a collar. The bolt is inserted into one side of the joint material and the collar is placed over the bolt from the other side of the joint material. Access to both sides of the joint is required. A Huck installation tool is used to swage the collar materials into the grooves of the bolt providing a permanent and vibration resistant fastening.

Key Benefits:

- Permanent, mechanically locked fastener
- Installation process automatically provides fastener values
- No torque or re-torque required
- Unlike conventional nuts and bolts, they will not work loose, even during extreme vibration
- Rapid installation with Quick and easy visual inspection
- Excellent gap closure capability
- Can be installed onto angled surfaces (5° maximum)
- Tamperproof

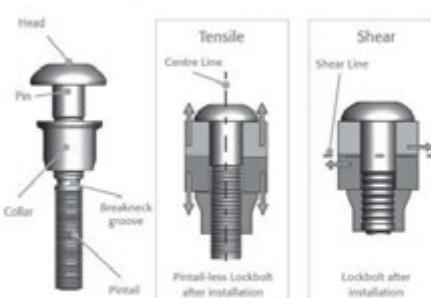

HOW LOCKBOLTS WORK

Clamp Force or Pre-Load: In the initial stages of the installation process, the tool engages and pulls on the pintail. The joint is pulled together before the conical shaped cavity of the nose assembly is forced down the collar. This progressively locks (swages) it into the grooves of the harder pin. The pin and swaged collar combine to form the installed fastener.

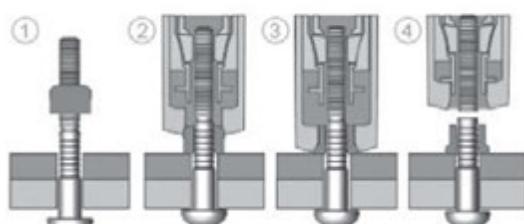

The squeezing action reduces the diameter of the collar, increasing its length. This in turn stretches the pin, generating a clamp force over the joint.

Shear strength of LockBolts vary according to the material strength and minimal diameter of the fastener. By increasing the diameter or the grade of material, the shear strength of the fastener can be increased.

The tensile strength of LockBolts is dependent on the shear resistance of the collar material and the number of grooves it fills

LockBolt Installation Sequence

1. Pin placed into prepared hole - Collar placed over pin
2. Tool is placed over the fastener pintail and activated
 - Pin head pulled against material
 - Anvil pushes collar against joint
 - Initial clamp generated
3. Tool swages collar, increasing clamp
4. Pintail breaks, installation complete

RIVET NUTS: L-SERIES

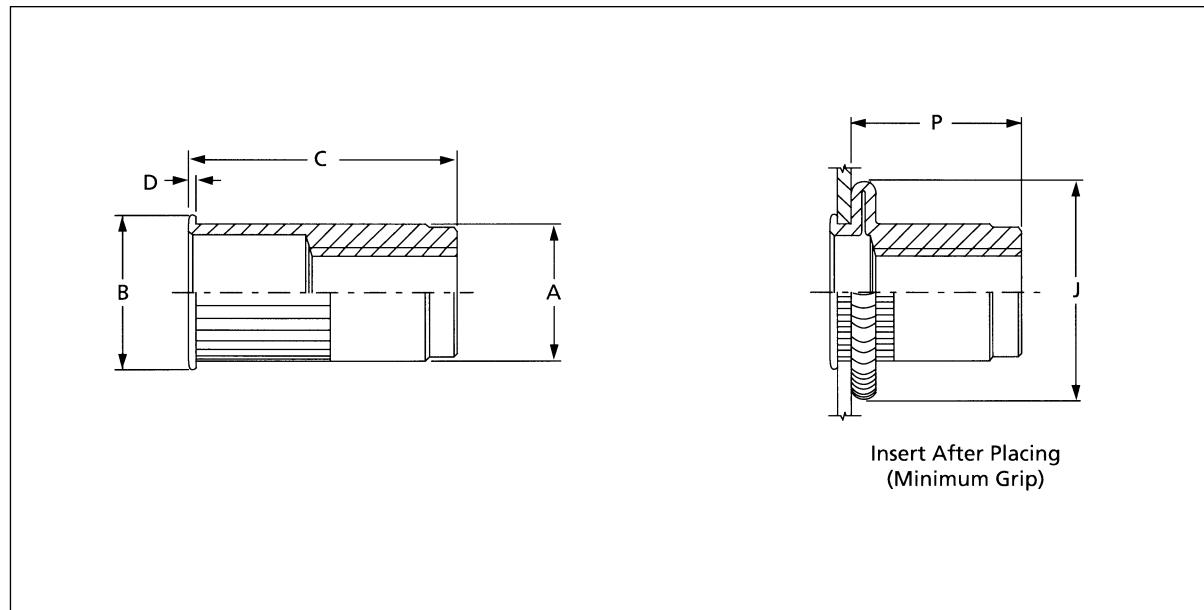

The ribbed L Rivet Nut Series features a large flange head configuration with a ribbed body.

RIBBED BODY

The ribbed body provides increased resistance from spinning.

LARGE HEAD

Provides a large bearing surface which increases push-out performance.

RIVET NUTS: L-SERIES

RIVET NUTS: K-SERIES

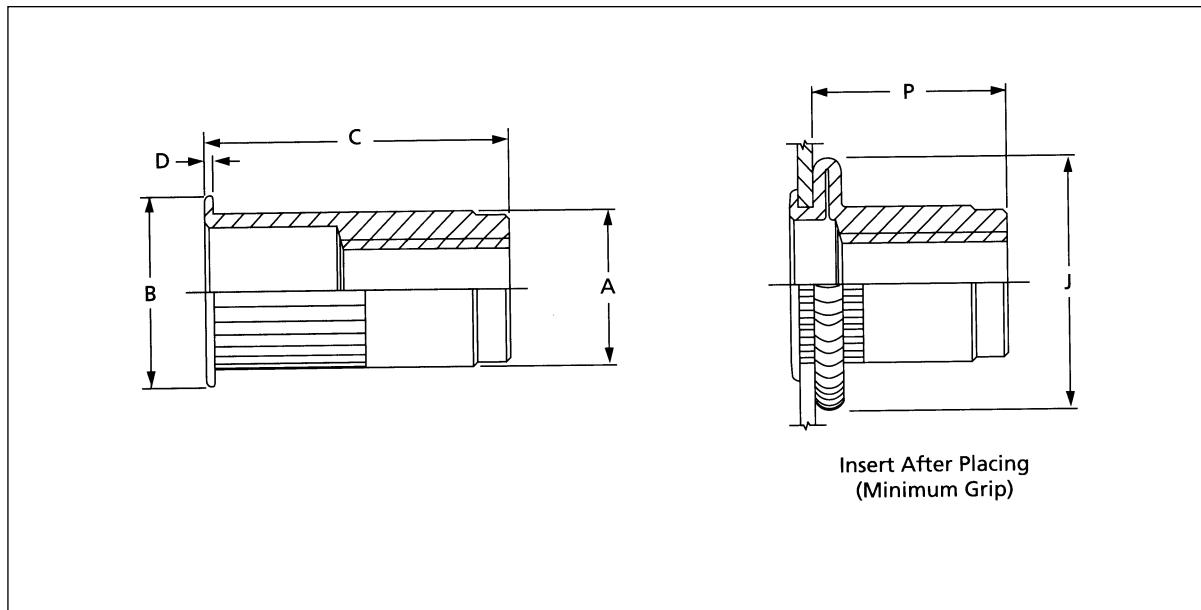

The ribbed K Rivet Nut Series features a reduced head configuration with a ribbed body.

RIBBED BODY

The ribbed body provides increased resistance from spinning.

REDUCED HEAD

Provides near flush head with the surface.

HEX RIVET NUTS

The Hex rivet nut offers superior spin out resistance in hex holes. The part is **supplied in steel** but may be purchased in other materials though minimums may apply.

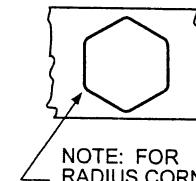

OPEN END TYPE

Thread Specifications: Unified 2B/21 per ASME B1.1
Metric 6H/21 per ASME B1.13M

RIVET NUTS AND THREADED INSERTS

Flat Head Rivet Nuts

The Flat Head rivet nut is designed for applications needing superior push out loads and features a large bearing surface.

Threaded Inserts

Thread-Serts are versatile threaded fasteners that can be used in a variety of applications. Use Thread-Serts in any thickness of metal or rigid material of at least 3/32" (.0937). Eliminate the need for tapping, welding and brazing. Thread-Sert design consists of an upper sleeve and a base which both have internal and external threads. During installation the base is drawn upwards inside the upper sleeve forcing a 360° contact between the sleeve and application material. No special preparation is needed; a drilled or punched hole is all that is required. Because of its unique setting ability, Thread-Serts can be used in almost any thickness of material. Installation is made easy with a variety of tools and kits.

JACK NUTS

Jack Nuts are used for light duty, thin, or brittle material. They accommodate slightly oversized holes with a large back side footprint similar to a wall anchor. Jack Nuts utilize a dedicated manual tool for proper installation.

Our jack nut installation tool is designed to effortlessly set jack nuts in sizes ranging from 6-32 – 1/4-20", and M4 – M6. It works by threading the bolt to the jacknut, then dropping the component in the slot of the tool, inserting it into the pre-drilled hole, and squeezing until set. Pressing the release lever, then tightening completes the installation.

RIVNUT® PN - PLUSNUT® PRE-BULBED

The Rivnut® PN – Plusnut® Pre-Bulbed has been designed to be installed using torque controlled hand or power tools. A simple torque hand tool can be packaged with this fastener for customer installation. Use of the C 350 power tool can install this fastener in variable thickness plastic materials such as those produced by rotational or blow molding. A grip ID mark is included on the head of the fastener for grip range identification.

RIVNUT® PN - PLUSNUT®

The Rivnut® PN – Plusnut® has been designed to provide the ultimate pull out strength in thin sheet metals and plastic. Its slotted body splits into four legs providing a wide load-bearing surface on the backside of the parent material. The Rivnut® PN – Plusnut® also features the widest grip range of any blind threaded nut. A grip ID mark is included on the head of the fastener for grip range identification.

THREAD REPAIR KITS - UNIQUE/SPECIAL THREAD SIZE KITS

Features

- Create stronger and more efficient threads.
- Simple and easy to use.
- Designed for use in material such as alloys, steel, magnesium, plastic etc.
- Simplifies changeover from different thread forms
- Meets all current Military and Aviation Specifications
- Interchangeable with other brands of helically wound inserts.
- Wide temperature range of up to 800°F (430°C)
- Recoil is ISO 9001 registered.

Each kit contains a tool and inserts (helicals).

THREAD REPAIR KITS - INDIVIDUAL THREAD SIZE KITS

Features

- Create stronger and more efficient threads.
- Simple and easy to use.
- Designed for use in material such as alloys, steel, magnesium, plastic etc.
- Simplifies changeover from different thread forms
- Meets all current Military and Aviation Specifications
- Interchangeable with other brands of helically wound inserts.
- Wide temperature range of up to 800°F (430°C)
- Recoil is ISO 9001 registered.

Each kit contains a tool and inserts (helicals).

EYELETS

EYELETS

Our GS Eyelets consists of various eyelets where the length and outside barrel diameters are graduated by 1/32". This grouping will meet the requirements of most general purpose eyeleting applications. Eyelets are most commonly requested in brass. Eyelets can also be made from steel, stainless steel, aluminum, and copper.

Eyelet Options

In addition to our Rolled Flange GS® Eyelets, GS® Eyelets can also be made with a flat flange, or with a closed end.

STEEL BARREL NUTS & SCREWS

Steel Zinc Plated Barrel Nuts and Screws also known as Sex Bolts.

Post/Barrels (.250" barrel dia. x .438" head O.D. - Slotted/Phillips combination)

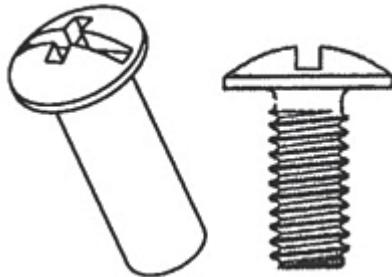

Screws (10-24 thread dia. x .438" head O.D. - Slotted/Phillips combination).

Zinc plated steel. For use in 17/64" holes.

Low profile, matching head on both the bolt and screw allow for a nice clean look.

For use in 17/64" (.265) holes

10-24 Thread Size

SCREW

10-24 Thread Size

Part Number	Description	Length	Material	Head Style
S-312S	Screw	5/16"	Zinc Plated Steel	Closed End, Combo Drive

POST/BARRELS

1/4 (.250) Outside Diameter and Slotted/Phillips combination

Part Number	Description	Length	Material	Head Style
B-250S	Barrel	1/4"	Zinc Plated Steel	Open End, Slotted Drive
B-375SE	Barrel	3/8"	Zinc Plated Steel	Closed End, Combo Drive

PLASTIC BINDER POSTS & SCREWS

Large, low profile matching slotted heads on both the post and screw allow for a nice, clean look. Screw can be pushed in for fast assembly. For best results, insert screw length completely.

Removable and reusable. Each assembly consists of one post and one screw. Binding capacity is determined by length of post used. Otherwise known as Quick-Connect or Adjust-A-Locks

- Female posts are .240" barrel dia. x .562" head O.D. - slotted
- Male screws are 10-24 thread dia. x .562" head O.D. - slotted
- For use in 1/4" holes
- Available in Black or White

7/8 - 1	21-08	0.178	3-3/4	1-1/32

CLECO FASTENERS/TEMPORARY RIVETS

Cleco fasteners provide the quickest method for holding sheets together for drilling or riveting. Drill the size hole needed for the rivet and insert the sheet holder. The Cleco fasteners listed comprise the most common sizes. Material thickness range 0" - 1/4". Cleco fasteners are color coded for easy identification. Use with Cleco fastener pliers.

- AN470 SUPERSEDES AN430, AN442, AN455 & AN456 IN MOST APPLICATIONS.
- AN425 INACTIVE.
– Example: AN-470-AD-4-8

AN – When these two letters precede numbers, they indicate Army and Navy specifications.

MS – When these two letters precede numbers, they indicate Military Standard specifications.

470 – The first three numbers indicate the type of head:
470 = universal head, 430 = round head, etc.

AD – Letters following head type code indicate material:
A = 1100(2S) aluminum, AD = 2117-T4 (A17ST), etc.

4 – First numbers after material code indicate diameter of rivet in 32nds of an inch. 4 = 4/32" or 1/8", 12 = 12/32" or 3/8", etc.

8 – Last numbers indicate length of rivet in 16ths of an inch:
8 = 8/16" or 1/2", 10 = 10/16" or 5/8", etc.
