## **PRODUCT CATALOG**

# **KEN FORGING**

Committed to Quality and Total Customer Satisfaction

## **WHO WE ARE**

LEADING **U.S.A.** MANUFACTURER OF FORGED INDUSTRIAL HARDWARE AND CUSTOM FORGINGS

## **MISSION STATEMENT**

### ***"The Customer Is First"***

**Ken Forging, Inc. is committed to total customer satisfaction, achieving this goal by manufacturing products of a superior quality at competitive prices.** We have set a standard for ourselves, with our customers in mind, with which we provide the best product available in a timely manner that is second to none. We attain these standards by implementing and sustaining effective quality programs, instilling in our employees the belief that everyone within the company is responsible for the quality of our product, and providing a quick turn-around to our customers. We will always strive to better ourselves and our products, and we will continue to grow and lead the industrial hardware industry into the future.

## **WHAT WE PROVIDE**

### ***\$VALUE-ADDED SERVICE***

- \* **Immediate delivery within 24 hours from stock**
- \* **Prompt response on inquiries, quotations, orders**
- \* **No minimums---combination pricing**
- \* **Quality with full traceability**
- \* **Competitive pricing**
- \* **Courteous knowledgeable staff**
- \* **Technical Support**

## **OUR FACILITY**

420,000 Sq. Ft. Plant. Forge, Die Shop, Machining Department & Quality Department.

## **OUR LOCATION**

Jefferson, Ohio 65 miles East of Cleveland, OH  
40 miles West of Erie, PA

## Ordering & Shipping Terms & Conditions

### **Placing An Order**

You can expedite your order by making sure all the information on your order form is complete and correct. Refer to our catalog to ensure your order has the correct stock numbers, dimensions and material. **We encourage you to use the FAX Order/Quote Inquiry Forms located throughout the catalog to minimize possible verbal errors.** Special modified/custom items shall require an approval signature. Our policy is to ship the same day when possible or next day on stock items.

### **Variation Of Quantity**

On special modified/custom orders Ken Forging, Inc. reserves the right to a quantity variation for allowances in manufacturing.

### **Terms**

Established accounts: 1% - 10 days; Net 30.

Customers who have not ordered in over two years will need to complete a new credit application in order to re-establish an account with Ken Forging, Inc. Past payment history with Ken Forging, Inc. will be taken into account regardless of the credit application results.

For your convenience Visa, MasterCard and American Express are accepted.

### **Freight**

F.O.B. Jefferson, Ohio - Customer must advise their preferred method of shipment. LTL shipments will be insured ONLY if specifically requested by customer. **ALL UPS SHIPMENTS** will be insured at current UPS rate unless customer specifies otherwise. **ALL UPS SHIPMENTS** will be charged a handling fee based upon total number of cartons shipped.

### **Prices**

Prices are effective immediately and supersede all previous prices listed in catalogs & catalog supplements.

### **Handling Lost or Damaged Products**

**If a shipment is lost, notify our sales department as quickly as possible.** We will assist in tracing the shipment and contact you regarding the disposition of the order. **If you receive damaged products,** notify the shipper immediately so that a claim may be filed by the responsible party. If you do not check product upon arrival, you will not have a valid claim against the shipper after 5 working days. **For a shipment discrepancy,** call Ken Forging, Inc. immediately. **We cannot be responsible for claims after five (5) working days.**

### **Return Policy**

**In the event that you need to return products, you must call first for authorization; otherwise, a credit cannot be issued.** Return shipments must be prepaid. A restocking fee of 25% on the value of product or \$30.00 minimum (whichever is greater) will apply. Product cannot be accepted for return after ninety (90) days from shipment date.

**SPECIAL MODIFIED/CUSTOM ORDERS CAN NOT BE RETURNED.**

### **Warranty**

Ken Forging, Inc. warrants its products against defective materials and workmanship at time of shipment. Carrier assumes responsibility for damage in transit.

## Eyebolt Information

**Ken Forging Machinery Eyebolts are manufactured to ASME B18.15 and tested to ASTM A489 specifications.**

### EYEBOLT TRACEABILITY MARKINGS

Shoulder (Front View)

Plain (Front View)

### Material Data

<b>Material</b>	Carbon Steel
<b>Heat Treat</b>	Quench and Draw
<b>Grain Size</b>	5 or finer
<b>Tensile</b>	65,000 PSI MIN - 90,000 PSI MAX
<b>Yield</b>	30,000 PSI MIN
<b>Elongation</b>	30% MIN
<b>Reduction of Area</b>	60% MIN
<b>Rated Capacity</b>	See page 8

### Application/Installation

- The receiving hole should be counter-sunk and be free and clear of any debris to assure proper seating.
- LOADS SHOULD ALWAYS BE ALIGNED TO THE PLANE OF THE EYE, not at an angle to the plane. A steel washer or spacer may be used in conjunction with Shoulder Eyebolts to attain proper load alignment. The thickness of the steel washer or spacer must not exceed one thread pitch.
- Angular lifting should be avoided. **Angular lifts significantly reduce rated capacities.** See Eyebolt Rated Capacities/Guidelines (page 7).
- Check seating after applying an angular lift since the initial lift may cause the bolt to back away from the load. If such occurs, the Eyebolt should be unloaded & properly resealed.
- For applications with untapped through-holes, longer length Shoulder Eyebolts are recommended, using a steel washer and nut for the required thread length of engagement.
- Shoulder Eyebolt tapped holes are to have a threaded length which allows for full length of shank engagement and clearance for the unthreaded portion of shank.
- Shoulder Eyebolts must be firmly seated and flush against the mating surface; otherwise, the rated capacity is reduced significantly. The use of a steel washer or spacer is permissible and may be required; however, the thickness must not exceed one thread pitch.
- Plain Eyebolt tapped holes are to be threaded for full length engagement of the Eyebolt.
- Plain Eyebolts must have full thread shank engagement, allowing for one-half turn for proper eye-alignment to obtain rated capacities.

### Inspection/Maintenance Safety

- Eyebolts should be inspected and installed by a competent person who is knowledgeable about the application and installation of Eyebolts.
- Each Eyebolt must be completely inspected BEFORE each use for possible defects such as: distortion, bent shank/threads, or incomplete/incorrectly formed threads. Periodic inspection of Eyebolts is highly recommended.
- Eyebolts should not be painted or otherwise coated when used for lifting; such coatings make it difficult to inspect for defects or wear indicators.
- Eyebolts should not be left where they can incur mechanical damage or corrosion.
- **Destroy Eyebolts when signs of bend, elongation, wear or damage are visible.** Such signs indicate that the Eyebolt has been stressed (overloaded) beyond rated capacity. Never attempt to repair a stressed Eyebolt.
- **Destroy Eyebolts when they show any signs of alteration.** Signs include: gouging, undercutting, welding, etc.
- **Proper Destruction of an Eyebolt:** crushing or cutting clear across the eye of the Eyebolt.

## Eyebolt Information

### Safety Precautions

- **DO NOT** work, stand or crawl around the load of the Eyebolt. Ensure a safe distance from the load.
- **DO NOT** use wrenches, crowbars, etc. to tighten Eyebolts. Hand tightening is recommended.
- **DO NOT** use a single Eyebolt to lift a load that can rotate. **Safety Swivel Hoist Rings (page 63) are recommended for such loads.**
- **DO NOT** force hooks or any other fittings into the eye; they must fit freely.
- **DO NOT** exceed the Rated Capacity.
- **DO NOT SHOCK LOAD EYEBOLTS.** Gradually increase lifting of the load to minimize load-shock.
- **DO NOT** weld Eyebolts, or perform any weld-repair on Eyebolts.
- **DO NOT** machine Eyebolts on the shank or shoulder to achieve proper seating.
- **DO NOT** expose Eyebolts to extreme environmental conditions, as they may adversely affect the Rated Capacity.

### Shoulder Eyebolt Rated Capacities

Size	0° Lbs.	45° Lbs.	46° +
1/4	500	125	<b>SAFETY SWIVEL HOIST RINGS RECOMMENDED (PAGE 63)</b>
5/16	900	225	
3/8	1,300	325	
7/16	1,800	450	
1/2	2,400	600	
9/16	3,000	800	
5/8	4,000	1,000	
3/4	5,000	1,250	
7/8	7,000	1,750	
1	9,000	2,250	
1 1/8	12,000	3,000	
1 1/4	15,000	3,750	
1 1/2	21,000	5,250	
1 3/4	28,000	7,000	
2	38,000	9,500	
2 1/2	56,000	14,000	

**NOTE:** Plain Eyebolt angular rated capacities are significantly lower than Shoulder Eyebolt rated capacities; therefore, angular lifting is not recommended.

### Eyebolt Rated Capacity Guidelines

- Eyebolts are designed with a 5:1 Safety Factor.
- The minimum threaded shank length of Eyebolts must be one thread diameter to attain the rated capacity.
- Regardless of the 5:1 Safety Factor, no greater load should be applied to an Eyebolt than the Rated Capacity listed.
- **Angular lifts significantly reduce Shoulder Eyebolt Rated Capacities.** Shoulder Eyebolts should not be used for angular lifts greater than 45°; **Safety Swivel Hoist Rings (page 63) are recommended for such applications.**
- **Plain Eyebolts are not recommended for angular load applications. Safety Swivel Hoist Rings (page 63) are recommended for such applications.**

## Safety Swivel Hoist Rings Safety Precautions

**AS WITH ALL MECHANICAL DEVICES, REGULAR INSPECTION FOR WEAR AND STRICT ADHERENCE TO USE INSTRUCTION IS NECESSARY TO PREVENT MISUSE FAILURE.**

Regardless of the 5:1 safety factor on hoist rings, **NEVER EXCEED THE RATED CAPACITY.** Rated capacities are marked on each hoist ring. This safety margin is needed in case of misuse, which could drastically lower load capacity

- Make sure the hoist ring pivots and rotates in all directions freely (Fig. 2)
- Tighten mounting bolts to torque recommended (the torque values are stamped on each hoist ring). Periodically check torque because bolts could loosen in extended service
- Do not apply shock loads. Always lift gradually. Repeat magnaflux testing if shock loading ever occurs.
- Do not use spacers between the hoist ring bushing and the mounting surface
- Thread engagement when installing in steel should be a minimum of 1-1/2 times the bolt diameter. For softer materials, such as aluminum, thread engagement should be a minimum of 2 times the bolt diameter. The Tensile Strength of parent material should be above 80,000 PSI to achieve full load rating. For weaker material, consider through-hole mounting with a nut and washer on the other side (nuts & washers must be of the same grade as the Hoist Ring).

### DO's

- Observe working load limitations, paying careful attention to angular lifts (Fig. 4)
- Visually inspect each hoist ring prior to each lift
- Ensure Hoist Rings are tightened to the recommended Torque values
- Assure proper thread depth and length of thread engagement (1-1/2 times for steel, 2 times for softer material such as aluminum) (Fig. 3)
- Make sure Hoist Rings have free travel - they must swivel and pivot without restriction (Fig. 2)

### DON'Ts

- **Never** pull the hoist ring bar from the side
- **Never** use an oversized hook (Fig. 1)
- **Never** use an excessive angle
- **Never** apply shock loads
- **Never** steam clean or degrease a hoist ring
- **Never** allow the side of a hoist ring to make contact with the lift

**IMPORTANT:** The load on each hoist ring is not simply total weight divided by the number of hoist rings. The resultant force can be significantly greater at shallow lift angles and unevenly distributed loads. See the example below:

Sling Angle (Degrees)	Applied Load (Pounds)
90	1000
75	1040
60	1155
45	1410
30	2000
15	3860
