Design Information

- The shear and tensile strength of the rivet selected and the number of rivets used in the application should equal or exceed the joint strength requirements. Typical ultimate shear and tensile strengths are listed by diameter and material on pages 5 through 17 of this catalog. Testing is recommended before final selection and use in product.
- The rivet body material should be compatible with the materials to be joined to resist galvanic corrosion which may result in reduction of joint strength. If dissimilar materials are widely separated on the galvanic chart, it is advisable to separate them with a dielectric material such as paint or other coating. AFS can paint colors to match, as well as anodize or plate to your specifications.
- After determination of strengths required by diameter and material, the total thickness of materials to be joined must be considered. The grip range for each rivet is listed on pages 5 through 17. Select the rivet grip range which includes the total thickness of materials to be joined. Please note that the rivet barrel length (Column L) is not the grip range.
- Use recommended hole sizes for each rivet as shown on pages 5 through 17. An undersize hole will not allow insertion of rivet body. An oversize hole may cause rivet or joint failure and could adversely affect rivet shear and tensile strengths.
- The various head styles (illustrated on page 3) are offered to accommodate different assembly needs. The most popular Klik-Fast rivet is the buttonhead, whose lower-profile head is twice the diameter of the rivet body. This provides adequate bearing surface for nearly all applications. The large flange Klik-Fast rivet provides greater bearing surface for fastening soft or brittle facing materials. The countersunk Klik-Fast rivet is available for applications where a flush appearance is required.
- Please visit us at afsindustrial.com and e-mail your questions. We will follow up with evaluations, recommendations and testing if required.
 - Samples are available upon request
 - Special packaging available

Installation Sequence

1 Insert rivet mandrel in rivet setting tool.

2 Using tool as a guide, insert rivet into prepared hole.

3 Or insert rivet into prepared hole and then engage the mandrel with rivet-setting tool. Squeeze trigger or handles to set rivet. Mandrel ejects after rivet is set.

**ALSO AVAILABLE IN PACKAGED QUANTITIES. *KLIK-FAST MULTI-GRIP RIVETS CONFORM TO IFI-116.

Multi-grip rivets provide an effective and economical alternative to other, more costly methods of fastening, because one size handles the grip range capacity of up to 3 standard open end rivets. Multi-grip rivets can be used in any application requiring open end rivets, while reducing inventory requirements. Use multi-grip rivets as a standard open-end rivet — no special tool is needed.

1
After drilling hole to proper diameter, rivet is placed into hole and rivet setting tool is placed over mandrel.

2
Actuating tool starts mandrel into rivet body, pulling work material together and expanding body on the blind side.

3
Solid circle lock is created between the body and mandrel, creating a weather-resistant assembly that virtually eliminates pin pushout.

4
After the mandrel is broken, the mandrel is flush with the rivet body, removing the need for grinding.

5
The expansion of the body tightly fills the hole, creating a weather-resistant joint.

Plastic Rivets and Tools

Klik-Lok™ Plastic Rivets • Nylon Body ST801HS • Delrin 500 Mandrel

Marson brand Klik-Lok Plastic Rivets are the same precision-molded all-nylon rivets used by domestic auto manufacturers, both for original equipment and replacement parts. In addition, Klik-Lok Plastic Rivets are ideal for non-conductive and non-corrosive environments. Klik-Lok Plastic Rivets fasten plastic to plastic, plastic to metal and plastic to fiberglass. As they set, three “legs” form to securely lock the components in place and prevent pullout.

Hand Rivet Tools

HP-2® / M39000*

The HP-2 is the number one selling hand rivet tool in the industry. Known and trusted for durability, quality and performance, the HP-2 is often copied but never duplicated. Its square shoulder fulcrum pin of cold-formed heat-treated steel prevents pin rotation that can elongate the engaging holes and cause premature tool failure in imitation tools. Other quality features include: precision die-cast, high-strength aluminum alloy body; drop-forged carbon steel upper handle; and thick, cushion-molded vinyl grips for comfort. The HP-2 sets up to 3/16" steel rivets and comes with four mounted nosepieces (3/32", 1/8", 5/32" and 3/16") and a service wrench. Refer to the Hand Rivet Tool Capacity Chart on page 19 for specific capabilities. Weight: 1.2 lbs.

HP-3® / M39002

This hand rivet tool offers long ergonomically designed handles to increase leverage. The tool is spring-loaded to secure the rivet in the nosepiece while the tool is in any position. The HP-3 offers powerful riveting capacity with 4 standard nosepieces to set 3/32", 1/8" and 5/32" in all alloys and up to 3/16" in steel. It features a drop-forged steel handle with heat-treated aluminum body with steel insert, high quality powder coated finish, special alloy steel fulcrum pin with anti-wearing design and durable jaws and jaw case. Weight: 1.2 lbs.

Klik-Turn™ SP-1 / M39005

The SP-1 swivel head hand-held rivet tool features a patented positive-ratchet locking feature which will allow the swivel head section of the tool to turn 360° and hold in place in any of the forty-plus positions. The high-strength steel body and cast aluminum head complement this innovative design in a swivel head riveting tool. The SP-1 also includes built-in threaded nosepiece storage holes and a service wrench. The SP-1 sets up to 3/16" steel rivets. Weight: 1.2 lbs.

200 Kit™ / M39001*

The deluxe hand riveter kit includes the HP-2 and 200 assorted Klik-Fast rivets: 50 each SB4-2, SB4-4, AB4-2A; 25 each SC4-4, AB6-2. The molded plastic case houses and protects the tool and rivets. Weight: 4 lbs.

Marson Rivet Nuts

More Styles, Sizes and Tools to Fit Your Application Needs

Marson Rivet Nuts deliver low cost, permanent thread placement in thin material while providing at least six full thread turns per application install. Easy installation can be completed by one operator with minimum training. Blindside access is not required when installing Marson Rivet Nuts. Ideal for painted surfaces, Marson Rivet Nuts help increase production and reduce rework by eliminating the surface damage that can occur with other fastening methods.

4 Easy Steps to Complete Installation and Application

- 1 Thread Rivet Nut onto tool mandrel and insert into hole. 
- 2 Actuate tool to properly set fastener into material. 
- 3 Complete your fastening operation with a bolt or screw with the proper thread. 
- 4 The positive riveting action of the Klik Rivet Nut will provide a permanent thread. As threads are tightened, so are Rivet Nut and application. 

Rivet Nuts can be used to fasten multiple sheets as well as single sheets.

Spin/Pull Tool Stroke Adjustment

Follow these easy steps for correct tool stroke adjustment:

1. Measure and write down the overall length of Rivet Nut.
2. Write down the Maximum Grip Range of the Rivet Nut (reference catalog).
3. Subtract Material Thickness from Maximum Grip range.
4. Add the Pull-up Factor from chart at right for your existing thread size.
5. This will give you the correct stroke required to properly set the Rivet Nut.
6. To double check, set a Rivet Nut, measure length and subtract from length of a non-set Rivet Nut (#1). Adjust tool stroke accordingly.

Example: M57150 (1/4-20) Rivet Nut
 Max Grip of Rivet Nut: (.080)
 Subtract Material Thickness: - (.060)
 Difference: (.020)
 Add Pull-up Factor for 1/4": + (.095)
 Equals Required Tool Stroke: = (.115)

Refer to page 39 for fractional breakdown of decimal.
