As an aid to reassembly, take notice of wire routings and position in wire guides and traps while dismantling tool.

Be sure that all components of electronics kit are seated firmly and squarely in housing recesses.

Avoid pinched wires, be sure that all wires and sleeves are pressed completely down in wire traps.

Prior to securing housing cover onto the housing support, be sure that there are no interferences.

Before installing the battery, check for proper functionality of shuttles and triggers.

Install battery and depress switch triggers to assure tool is operating properly.

Chain Tensioner Adjustment Screw (18)

1. Remove battery prior to doing any adjustments to tool!
2. The chain can be adjusted but using the Chain Tensioner Adjustment Screw. Chain should be tensioned to 18-22 kgf/cm (15-19 in/lbs) by using a torque screwdriver.
3. Manually check chain by pulling away from guide bar approximately 3mm (1/8"), chain should snap back. Chain should be able to be pulled without difficulty.
