Technical Tip For Late Models

Late Model Condensers Cannot Be Flushed . . . Only Replaced

3/8" Tube & Fin

First OEM and
aftermarket design
R-12 ONLY!

First Generation
Serpentine

First high efficiency design
used later in R-12 & early
R-134a systems.

Second Generation
Serpentine

More passages closer
together. CANNOT be
flushed completely!

First Generation
Parallel Flow Condenser

Second Generation
Parallel Flow Condenser

The parallel flow condenser is by far the most efficient condenser to use with R134-a refrigerant. The multi-channel construction and multiple passes the refrigerant makes through the condenser allows maximum heat transfer. The smaller tubes and wide surface area allows the most refrigerant to come in contact with air flowing through the condenser fins.

The reasons for this efficiency is also one of its major drawbacks. These small tubes that efficiently transfer heat are so small that they trap any trash in the system that tries to pass through them. Flushing will not remove the trash from the condenser. This trash will create a restriction in the condenser and make the high side pressures go up. This forces the compressor to work harder and possibly fail. Trash in the condenser can also work itself free and end up at the compressor where it will also cause a failure.

If there is a situation where the system needs to be flushed we strongly recommend changing the condenser. This will cut down on comebacks and also will help extend the life of the AC system.

WARRANTY TERMS & CONDITIONS

All PrimaTech® Air Conditioning Components will be free from defects in material and workmanship for one year, unlimited mileage with the following exceptions:

- 1 - Air Conditioning Compressors: Failure to follow the Compressor Replacement Process outlined on the following page will void the warranty.
- 2 - Warranty can be processed nationwide by any PrimaTech distributor, regardless of where the product was initially purchased. Only PrimaTech products will be processed for warranty. If a product is warrantable, only the product will be replaced.
- 3 - Products rendered defective by misapplication, contamination, abuse, alteration or any change/adjustment are not warrantable. It is the user's responsibility to determine the suitability of any product to their specific application. Any product disassembly voids all warranty.
- 4 - There are no warranties or conditions beyond this document and no person is granted authorization to express or imply additional warranty or liability. The buyer's sole remedy for a warranted product is replacement of product per conditions above. In no event shall PrimaTech, its agents or employees be responsible for incidental or consequential damages nor negligence in any respect.

COMPRESSOR REPLACEMENT PROCESS

COMPRESSOR REPLACEMENT PROCESS

- Replace the accumulator or receiver drier.
- Replace the expansion device (orifice tube, expansion valve or liquid line containing the orifice tube).
- Replace the hose assemblies containing mufflers (these cannot be flushed).
- Closed loop flushing of components not replaced must be done.
- Catastrophic compressor failure requires the replacement of any parallel flow or serpentine style condenser.
- Install an in-line suction or liquid line filter.
- Use only approved R134a or R12 refrigerants. Blend or hydrocarbon refrigerants of any kind are unacceptable and will VOID all warranties.
- Where a parallel flow condenser is used, the condenser must be replaced as it cannot be flushed or cleaned.

***Failure to follow this process will void all compressor warranty claims.
Documentation may be required.***
